Optical Fiber Jacket Remover  
(for both φ 0.25 mm and φ 0.5 mm fibers)

Uses
This tool can perform two functions before installing field assembly connectors, FAS and FSC connectors: it removes the secondary jacket of a φ 0.5mm coated fiber, which becomes a φ 0.25mm fiber; and it removes the primary jacket of a φ 0.25mm coated fiber, which becomes a φ 0.125mm fiber.

Features
1. By combining two functions into a single tool, you do not have to carry two different tools any more. Thanks to sharing one frame for two functions, the tool is not only easy to carry with you but also available at a low price.
2. The drop cable holder ensures you to remove the jacket of a φ 0.5mm fiber keeping it straight by pushing the drop cable holder as far as it goes.
3. The fiber holder can be also easily attached to the slider protrusion.
4. The tool is designed to use easily for removing the jacket for a φ 0.25mm fiber and is as workable as a mechanical strippers for FA connectors.
